

To Whom It May Concern,

I am a Nurse Practitioner in Des Moines. I have been in practice since 2005. I have several Medicaid patients with skin conditions requiring Eucrisa. Eucrisa is an alternative for topical steroids in conditions like eczema and allergic reactions. Avoidance of topical steroids is very important in certain populations, especially children. Topical steroids can cause skin thinning and development of stretch marks. These issues can result in significant costs to the insurer down the road. Please consider better coverage for Eucrisa.

Thank you,
