

To whom it may concern,

As a Neurology provider in Iowa I'm writing to advocate for Nurtec ODT for my Iowa Medicaid patients. Nurtec ODT and the new class of CGRPs provide a great option for patients based on efficacy and a very clean side effect profile. I've had access to Nurtec ODT since March and my patients have had excellent results. Prior to the approval of CGRPs, we only had the triptan class to treat patients with Acute Migraines. While triptans worked, they come with a side effect profile that affect the patient's ability to function. Unlike triptans, Nurtec ODT is a novel medication that is effective and safe and NOT contraindicated in patients with stable cardiovascular disease or risk factors.

Respectfully,
