NEW DRUG REVIEW

Proprietary Name: Enjuvia™

Common Name: Synthetic Conjugated Estrogens

PDL Category: Estrogens - Tablets

<u>Comparable Products</u>	<u>Preferred Drug List/ Recommended Drug List Status</u>
Cenestin®	Preferred
Premarin®	Preferred

Summary

Indications and Usage: Treatment of moderate to severe vasomotor symptoms associated with menopause

Dosage Forms: Tablets; 0.3mg, 0.45mg, 0.625mg, and 1.25mg

Recommended Dosage: Start at 0.3mg once daily and adjust dose based on individual response. When used in postmenopausal women with an intact uterus, a progestin should also be initiated.

Common Adverse Drug Reactions: Headache, abdominal pain, breast pain

Contraindications: Undiagnosed abnormal genital bleeding, history of breast cancer, history of estrogen-dependent neoplasia, history of or active DVT or pulmonary embolism, active or recent arterial thromboembolic disease, hepatic dysfunction, hypersensitivity to any ingredients of the compound, known or suspected pregnancy.

Manufacturer: Duramed Pharmaceuticals, Inc.

Analysis: Enjuvia™ is a plant-derived formulation of ten synthetic estrogenic substances. The active ingredients are released over several hours due to a unique delivery system called Surelease® which delivers estrogen slowly at a controlled rate. There are no studies to date that compare Enjuvia™ to Premarin® or Cenestin®. Other synthetic conjugated estrogen products, both of animal and plant derivation, have preferred status on the PDL that are more cost effective.
